SUMMARY

Applied AI Engineer with **3+ years of software engineering experience** building and deploying **production AI applications and developer-facing systems**. Experienced in **LLMs, agentic AI, RAG, tool calling, Python, C#/.NET, React and Azure**, with hands-on experience taking AI products from **prototyping through production deployment**.

SKILLS

(**Programming:** Python, C#, SQL, .NET, JavaScript, TypeScript • **Applied AI:** LLMs, Agentic AI, RAG, Tool Calling, LLM Evaluation, **AI Coding Agents, Codex, Claude Code**, PyTorch, Scikit-learn • **Backend & Product:** FastAPI, REST APIs, React, PostgreSQL, MySQL • **Cloud & Deployment:** Microsoft Azure, AWS, GCP, Docker, Kubernetes, Terraform, Git)

WORK EXPERIENCE

Rabot Energy, *Product Engineer AI* Aug 2026 – Present | Hamburg, Germany

- Independently own and deliver **AI engineering projects across multiple teams**, working directly with stakeholders to identify problems, design solutions, and take projects from **requirements through production deployment**.
- Architected and deployed a **production-scale agentic AI platform** on **Microsoft Azure** for a product serving **1M+ customers**, integrating **LLMs, RAG, tool calling, multi-intent orchestration and voice AI**.
- Built **AI agents and backend services in C#/.NET** and integrated them with a **React frontend**, delivering end-to-end AI-powered product workflows.
- Work in an **AI-first engineering environment**, extensively using **Codex and Claude Code across the SDLC** for implementation, debugging, testing, refactoring and development workflows.
- Designed **distributed-system components**, including **rate limiting**, and deployed services using **Kubernetes and Terraform** to support reliable and scalable production workloads.

Bosch Sensortec, *Working Student in Data Science and Cloud Migration* Oct 2025 – Aug 2026 | Reutlingen, Germany

- Developed a **time-aware deep learning model** for industrial sensor anomaly detection and deployed it on **Microsoft Azure** for scalable inference.
- Built a **VLM-based inspection system** for automated sensor verification and deployed the solution on Azure for production use.
- Developed and Dockerized **computer vision and ML pipelines** using Databricks, MLflow and Azure, covering deployment, inference and model versioning.

Cellforce Group GmbH (Porsche) Apr 2025 – Sep 2025 | Reutlingen, Germany
Werkstudent Data Scientist
- Designed and developed an **AI-powered web platform** using **FastAPI, React, OpenAI APIs and PostgreSQL**, enabling automated patent retrieval, multilingual extraction and semantic search.
- Built an AI-based production-notes digitization platform using **FastAPI, React, OpenAI APIs and AWS**, transforming handwritten records into structured datasets.
- Developed **AWS data pipelines** supporting scalable processing and downstream analytics for engineering applications.

HdM Aquaware, *Research Assistant AI Lead* Mar 2025 – Apr 2025 | Stuttgart, Germany
- **Developed and evaluated multiple machine learning models**, including **XGBoost, Random Forests, Decision Trees, and neural networks**, applying **data augmentation** techniques to improve model robustness and predictive performance.
- **Built an automated GCP data ingestion pipeline** to transfer experimental data from Excel into a cloud database, enabling scalable data processing and analysis.

Eurofins IT Solutions Feb 2023 – Sep 2024 | Bangalore, India
Associate Full Stack Software Engineer
- Developed **backend services and REST APIs using C#/.NET** for enterprise applications and system integrations.
- Built frontend applications using **Angular and WPF**, contributing to end-to-end product development.
- Contributed across the **software development lifecycle**, including testing, code reviews, deployment, debugging and production support.

MASTER THESIS

LLM Fine-Tuning and Evaluation
- Fine-tuning and evaluating multiple **LLM variants** using controlled training-data distributions to study how post-training influences model behavior.
- Built automated **LLM evaluation pipelines** to systematically measure model behavior and consistency across different fine-tuning strategies.
- Developed an **LLM-as-a-Judge framework** for scalable evaluation across model variants.

EDUCATION

Universität Stuttgart, *Masters Computer Science* 2024 – 2026 | Stuttgart, Germany

New Horizon College of Engineering, *BTech Computer Science* 2019 – 2023 | Bangalore, India

PUBLICATIONS

Analysis of Deepfake Detection Techniques 🔗, *IEEE* 2023
Conducted research on deepfake detection, analyzing machine learning–based methods for identifying manipulated media and evaluating the factors affecting detection accuracy, including source-content quality and deepfake algorithm complexity; highlighted key challenges, limitations, and the need for more robust and trustworthy media verification systems.
